

Traffic Analyzer Ta 101

/ Product Description /

The Traffic analyzer is able to detect and to classify the approaching vehicles up to 8+1 categories.

The TA 101 system can detect the passing vehicles and make a classification with the analysis of the vehicle, producing these parameters:

- Number of the passages
- Speed
- Direction
- Classification up to 8+1 categories
- Date and time
- Distance between the vehicles

The system can be powered with:

- Power supply 12 Volt
- Power supply 220V 12V
- Solar panel

The downloading data can be done with the following methods:

- Through RS232 connection with a computer
- Through a direct reading of the removable memory
- Through a connection to the GSM/GPRS on board modem

/ Technical Data /

- Classification card able of monitoring up to 4 lanes
- The system can be configured via software
- Interface card and memorization with 128 MByte non-volatile memory, until a maximum of 1 GByte
- RS232 port for downloading data
- Slot-on-board for GSM/GPRS modem to download data
- Temperature sensor
- Two digital ingresses
- Alarms through sms
- Upgradeable system
