

30 cm Plastic Cone

1

	Dimensions: H: 30 cm Base: 21 x 21 cm		Construction materials: plastic product
	Weight: 0,3 Kg		External surface treatments: application of 1 band

Product Description

The cone is made of plastic and it is resistant to the hurts and crushing of the vehicles..

The body is painted using paint that reduces the ageing and increases the weather resistance.

The base of the cone has a shape that permits high visibility and reduces the rolling of the cone after a falling.

In the lower part the base is shaped in order to ease the water flow.

Easy handling during the installation and removal thanks to the grip on the top of the cone.

Working Description

The cone is used to delimit and to show working zones, for maintenance operations, to trace the horizontal signals, to show accident areas, for temporary channels of the traffic, for road blocks and to delimit temporary obstacles.

External surface treatments

➤Application of 1 band
