

# Road Mirror "Archimede"

1

	<b>Dimensions (H / L / W):</b> box road mirror Ø 60 cm: 73 x 73 x 17 cm		<b>Construction materials:</b> aluminium-plated acrylic with a black rubber gasket, the back body in high impact yellow ma- terial
	<b>Weight:</b> Ø 60 cm 3,7 kg		<b>External surface treatments:</b> reflecting part in aluminized acrylic

## Product Description

The circular yellow mirrors are made of plastic materials treated to ensure high impact resistance, weathering, UV rays and dust.

The mirror is made by a front side white case with black inserts along all the edges, and a convex mirror protected by a black rubber gasket.

To ensure that the mirror reflecting part snaps into the rear body tightly, the entire edge around the reflecting part has a rubber gasket kept by high resistant glue.

The mirror at the back has a galvanized and painted steel bracket for fastening onto poles and/or supports with minimum diameter of 60 mm diameter and flat attacks for round poles with a diameter of 48 mm and for square poles with maximum side of 60 mm; the bracket allows height, vertical and horizontal adjustments.

If it is subject to a violent blow by an outside object, the reflecting part will break but it will not shutter and thus cannot cause injury or property damage.

## Working Description

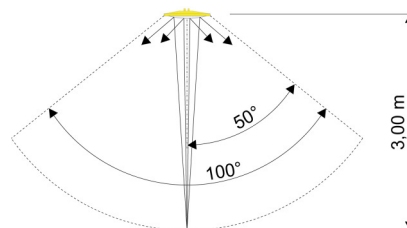

The circular yellow mirrors are particularly suitable in conditions of poor visibility as the reflecting part is convex and improves the field of view of roadway users.

The mirrors are used at intersections or in all cases of poor visibility.

## Different applications

Support arm with plate for wall and /or building fixing (with anchors), made of 60 mm cold galvanized tube and upper plastic cap.

## Viewing specific

## Packaging

<p>(pallet - 17 pcs)</p>	Dimension road Ø 60 cm: 80x120x h 200 cm weight: 75 kg
